

DURAPOST

Our DuraPosts are the best in the industry, the 2 3/8 inch pipe and .100 wall thickness provides the toughness that is required in the cattle market. They have 8 different slots for a total of 16 inches of adjustment, and the cables can be moved in a matter of seconds with the cable keeper system. If you would prefer to use a guard rail, we also have the same great post without the cable keeper system available.

PATENTED

Iowa Concrete has continuously made fundamental advances in the concrete feed bunk industry by combining standard concrete form methods with the easy to clean, sanitary surface of our patented plastic liner. This versatile system features a 36" wide liner that, when poured in place with a special blended adhesive, locks the sheet into the surface of the bunk. This results in a long lasting smooth surface for superior cattle comfort. Our patented bunk design is the only poured in place bunk liner on the market. You will not find another bunk that matches its superior longevity and toughness anywhere else!
